

MAKE SURE YOUR FURNITURE AND BUILDING MATERIALS ARE COMPLIANT WITH REGULATIONS

Furniture and building materials may emit formaldehyde that has been recognized as one of the major causes for degrading the indoor air quality and may affect human health. To deal with such health risks, many countries have established mandatory or voluntary rating systems to control the emission of formaldehyde and other hazardous substances in construction and furnishing materials.

STC offers formaldehyde testing on European regulations as below:

Testing Item	Test Method
Formaldehyde emission by the chamber method	BS EN 717-Part 1
Formaldehyde release by the gas analysis method	BS EN 717-Part 2
Formaldehyde release by the flask method	BS EN 717-Part 3
Formaldehyde content by the perforator method	BS EN 120

More testing services are available, please contact our staff of Textile, Furniture and Footwear Products Division.
