

## HK First HOKLAS accredited laboratory for male and female condom testing

Both male and female condoms could prevent the spread of viruses and effectively protect you and your partners from sexually transmitted diseases, such as AIDS, chlamydia, genital herpes, genital warts, gonorrhoea, hepatitis B, and syphilis, if used correctly. Besides, they are highly effective in preventing unwanted pregnancy.

Under normal conditions of storage or use, it is vital that condoms and any lubricant, additive, dressing, individual packaging materials or powder applied on condoms neither contain nor release toxic, irritative or otherwise harmful substances.

In accordance with AS 5074, ASTM D6324, EN ISO 4074, and GB/T 7544 (by CNAS) for male condoms; as well as ISO/DIS 25841.2 for female condoms, STC provides below testing services:

- |                                |   |
|--------------------------------|---|
| - Dimensions                   | - Visible defects                       |
| - Bursting volume and pressure | - Quantity of lubricant                 |
| - Package integrity            | - Tensile properties (male condom only) |
