

ASTM F2236-14 Safety Tests for Soft Infant and Toddler Carriers

Effective from 29 Sep 2014

Soft infant and toddler carrier is designed to carry a full term infant to a toddler, generally in an upright position, in close proximity to the caregiver. To minimize the risks of accidents to an infant or toddler in normal use and reasonably foreseeable misuse of these products, the US Consumer Product Safety Commission (CPSC) has published a final rule establishing a mandatory safety standard, ASTM F2236-14 Standard Consumer Safety Specification for Soft Infant and Toddler Carriers, and it will become effective from 29 September, 2014.

Hong Kong Standards and Testing Centre can perform testing according to ASTM F2236-14 which helps you to ensure the soft infant and toddler carriers comply with the safety requirements. Contact STC now to find out how our testing services can help you meet regulatory requirements and maximize operational efficiency.

Below are the related tests for soft infant and toddler carriers:

Physical tests

Chemical tests

Flammability tests

Marking and labeling tests

More testing services are available, please contact our staff of Textile, Furniture and Footwear Products Division.
