化学测试

CHEMICAL TEST

材料表征是对用于医疗器械的材料的组成、纯度、均匀度、杀菌剂残留以及可萃取物进行分析，是验证医疗器械是否适用于接触人体的重要步骤，在产品的整个生命周期中不可或缺。

随着欧盟RoHS 2的实施（该指令限制电器及电子产品中指定的有害物质的含量），医疗器械也被添加到涵盖范围，必须符合RoHS要求。

STC化学实验室配备了最先进的检测仪器，我们的专家团队运用多种方法进行材料表征检测和RoHS分析。根据设备和材料的预期用途，以及其直接跟人体接触的预期属性，STC可协助制造商确定恰当的测试程序。

Characterization for materials used in medical device – an analysis of a material’s composition, purity, uniformity, sterilant residuals and extractables – is an essential step to verify their suitability for human body contact, thus should not be missed out throughout the product life cycle.

Following the enforcement of RoHS 2 in the European Union, which restricts the use of specified hazardous substances in electrical and electronic equipment, medical device are now added to the scope of the Directive and have to be verified as RoHS-compliant.

The chemical laboratory at STC is equipped with the most advanced testing equipment; our team of experts can perform material characterization and RoHS analysis with a wide range of testing methods. We can help manufacturers identify the appropriate testing program based on the intended use of a device and material, and its expected nature of contact with the human body.
