在極端天氣情況下 測量您的產品和 物料的性能

Measuring the Performance of Your Products and Materials in Extreme Conditions

在瞬息萬變的社會，產品要具有特別功能，才可在市場上脫穎而出。除了現有的環境測試爐，我們新的環境測試爐可以在極端天氣情況下（從攝氏 -70度至180度），測試客戶的產品和物料。

In this rapidly changing environment, only products created with special features will stand out in the market. In addition to STC's existing environmental chambers, our **new chamber** can put clients' products and materials to tests in **extreme weather conditions** (from -70°C to 180°C).

產品通過這種極端情況的測試後，客戶可以在**產品研發初期**改進設計，從而避免產品在最後生產階段出現問題。

By conducting tests in the extreme conditions, we can help clients to enhance their products at the **early stage of product development**, so as to **minimize the risk of product failure** at the final stage of mass production.

測試物料範圍涵蓋**塗層紡織品、塑膠、木材、玻璃**等。

The range of tested materials covers **coated fabric, plastic, wood, glass** and even more.
